The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. This action is in response to applicant's amendment received on December 6, 2005.

- 2. The objection to the drawings is withdrawn in view of the amendment.
- 3. The objection to the specification is withdrawn in view of the amendment.
- 4. The text of those sections in Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1, 6-8, 10, 12, 20, 25, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hill (5,397,106) in view of Malachowski et al (5,219,159).

Hill discloses a sheet material trimming apparatus (see FIG 1) comprising: a first cutter (12') arranged to trim an edge (11) of a sheet material (1) in a first direction (shown by the arrows in the first step); and a second cutter (17') arranged to trim an edge (7) of a sheet material (1) in a second direction (shown by the arrows in the second step) different from the first direction. Hill fails to disclose a drive roller as claimed. However, Malachowski et al disclose a drive system having a drive roller (24) for advancing sheet material (100) in a first direction by rotation of the drive roller (24) and for translating the sheet material (100) in a second direction by translation of the

Art Unit: 3724

drive roller (24). See FIGS 1A-1C. This drive system aligns sheets that are out of alignment. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the Malachowski et al drive system as a station on the Hill apparatus prior to the cutting steps for the purpose of aligning sheets before cutting.

7. Claims 11 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hill in view of Malachowski as applied to claims 1, 6, and 12 above, and further in view of Kamprath et al (5,278,624).

The modified Hill device teaches a device substantially as claimed, but fails to disclose the drive shaft includes an external thread and the drive roller includes an internal thread. However, Kamprath et al/a drive system for moving and aligning sheets comprising a drive shaft (48) with an external thread (52) and a drive roller (14) with an internal thread. If unrestrained, the roller would translate with shaft rotation. However, with a holding or stopping mechanism, the roller rotates in a single location. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide an external thread on the drive shaft and internal thread on the roller of the modified Hill device, as taught by Kamprath et al, and include appropriate stops on the extents for the purpose of better controlling rotational and translational movement of the roller.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carolyn T. Blake whose telephone number is (571) 272-

as

Application/Control Number: 10/621,438
